Writing a simple spellcheck function

Spelling correction is one of the most natural and oldest natural language processing tasks. It may seem like a difficult task to you at the moment, but it's surprisingly easy to write a spellchecker that does fairly well. (Of course, companies like Google spend millions of dollars making their spellcheckers better and better, but we'll start with something simpler for now.)

- Read Peter Norvig's How to Write a Spelling Corrector. Recreate it in R and reproduce his results. **After** doing so yourself, read about this 2-line R implementation of Norvig's spellchecker.
